

# BANDAR SERI BEGAWAN (BSB) DEVELOPMENT MASTERPLAN STUDY, BRUNEI

The Development Master Plan Study for Bandar Seri Begawan (BSB) is setting out a plan to accommodate the potential growth of the city up to Year 2035. With the strong underlying economic growth, the population and employment could increase between 100% and 200% in this period.

The key points in the plan devised by the Study are;

- The major growth area to be located along the Sungai Kedayan and the Sungai Menglait;
- This produces a linear Transit Orientated Development (TOD) which is well suited to be served by upgraded public transport services;
- The Study is recommending that the transport improvements are planned on an integrated basis, with a balanced approach followed for both public transport and highway provision, and their associated facilities such as parking and interchanges;
- Enhancements to the existing bus services, are to be implemented as soon as possible; also the safe-guarding of a "reserve" for a new transit system operating on its own Right of Way which could be implemented in the near medium term. This could be an LRT;
- The study is recommending improved operations for taxis, water taxis, school buses and other bus services;
- The recommended transport provisions also included additional highway infrastructure, and traffic management measures to accommodate the traffic increases.
